# ConsumerVPN Client for macOS 10.14+

Getting Started Guide

1. Open the build settings for the project target
   a. Change your Bundle Identifier to a unique value
   b. Select your Signing Identity

2. Open the build settings for the project Wireguard Network Extension target
   a. Change your Bundle Identifier to a unique value
   b. Select your Signing Identity

3. Checkout Theme submodule.
    a. git submodule init
    b. git submodule update

4. Open the "Theme.swift" file and replace the following values:
    a. productName
    b. brandName
    c. configurationName
    d. forgotPasswordURL
    e. contactSupportURL
    f. usernameSuffix
    g. apiKey

5. Customize the colors in Theme.swift
6. Open the "tos.html" file and update your Terms of Service
7. In the Theme folder there is an asset catalog called "Assets.xcassets". We have provided an icon to be used in the server list for "best available". Feel free to replace this image with one of your own choosing. This icon will be shown at the top of the server list to allow the user to instruct the app to automatically choose the best server based on their location and the current load on the network.
